Kansas

County Health Rankings & Roadmaps brings actionable data, evidence, guidance, and stories to diverse leaders and residents so people and communities can be healthier. The University of Wisconsin Population Health Institute created CHR&R for communities across the nation, with funding from the Robert Wood Johnson Foundation. Currently, 104 of the 105 Kansas counties have rankings data. **Higher rankings are the least desirable.**

2022 Health Outcomes - Kansas

### What Do Differences Between Ranks Mean?

Counties are ordered by the health outcome rank, with a top-ranked county (rank = 1) having the best health outcome score. Ranks are good for sparking conversations, but they do not show differences in health within counties or describe the magnitude of difference in community health experienced between ranks. The chart next to the map shows the spread of health outcome scores (ranks) for each county (green circles) in Kansas. This graphic shows the size of the gaps between ranked counties. The background colors correspond to the map legend.

Health outcomes represent how healthy a county is right now. They reflect the physical and mental well-being of residents through measures representing the length and quality of life typically experienced in the community.

Health factors represent things that, if modified, can improve length and quality of life. They are predictors of how healthy our communities can be in the future. The four health factor areas in the model include Health Behaviors, Clinical Care, Social & Economic Factors, and Physical Environment.

## KSDE: Kansas Building Report Card / Performance Indicators - Longitudinal Performance Level Reports

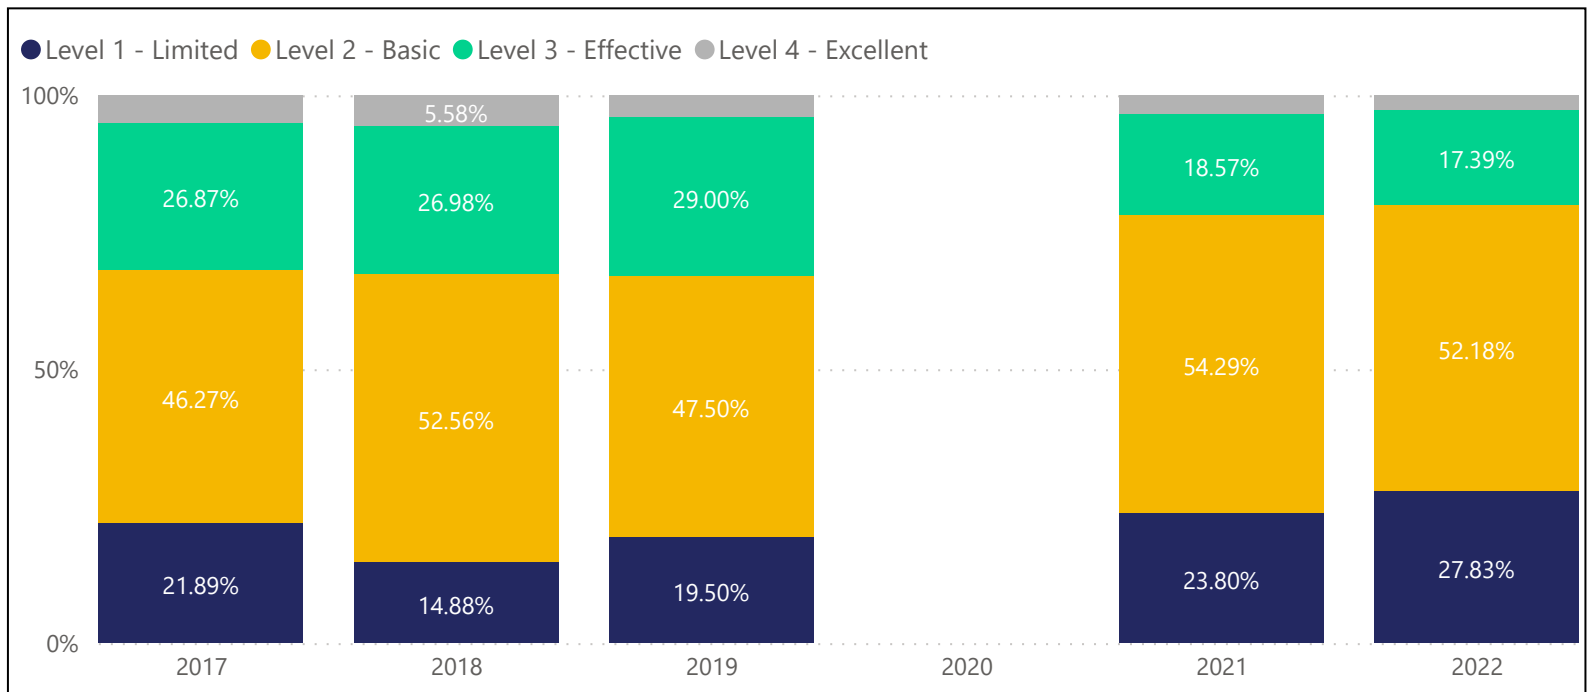

Kansas assessment results are now reported in four levels. Level 1 indicates that a student shows a limited ability to understand and use the skills and knowledge needed for Postsecondary Readiness. Level 2 indicates that a student shows a basic ability to understand and use the skills and knowledge needed for Postsecondary Readiness. Level 3 indicates that a student shows an effective ability to understand and use the skills and knowledge needed for Postsecondary Readiness. Level 4 indicates that a student shows an excellent ability to understand and use the skills and knowledge needed for Postsecondary Readiness.

Assessments were not conducted during the 2019-20 school year.

## Postsecondary Progress Report (Data from Kansas Report Card / Board Goals)

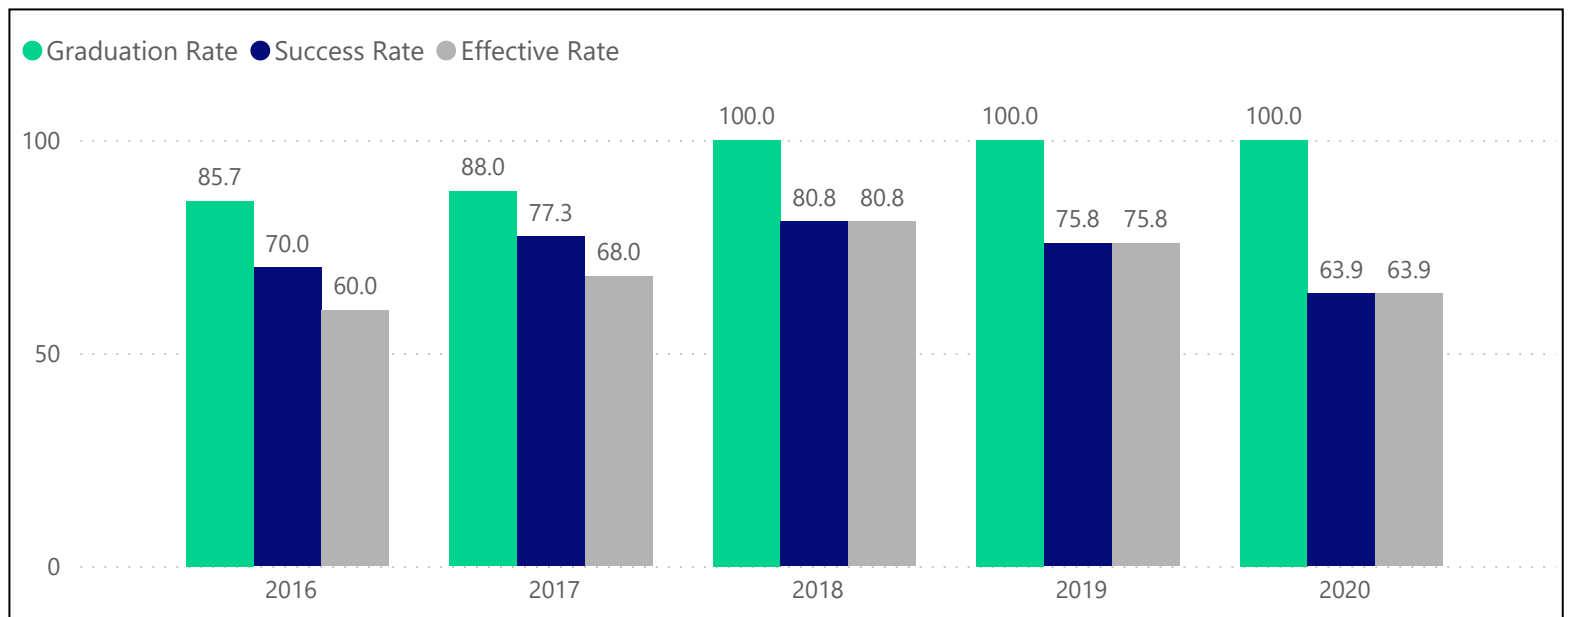

### Graduation Rate:

The 4-year adjusted cohort graduation rate is the number of students who graduate in four years with a regular high school diploma divided by the number of students who entered high school as 9th graders four years earlier (adjusting for transfers in and out).

**Success Rate:** A student must meet one of four within two years of high school graduation

1. Student earned an Industry Recognized Certification while in High School
2. Student earned a Postsecondary Certificate
3. Student earned a Postsecondary Degree
4. Student enrolled in Postsecondary in both the first and second year following High School

**Effective Rate:** The calculated Graduation Rate multiplied by the calculated Success Rate.

95.0

5-Year Graduation Rate

73.0

5-Year Success Rate

69.0

5-Year Effectiveness Rate

### 95% Confidence Interval for the Predicted Effectiveness Rate

50.1

53.6

Lower Bound

Upper Bound

If your district's five-year effectiveness average is within or above the predicted range, then your district effectiveness rates can be consider average, or maybe better than average, when compared to similar districts. On the other hand, if your district's five-year effectiveness average is below this predicted range then its performance, is either average or below average.

### Relative Performance

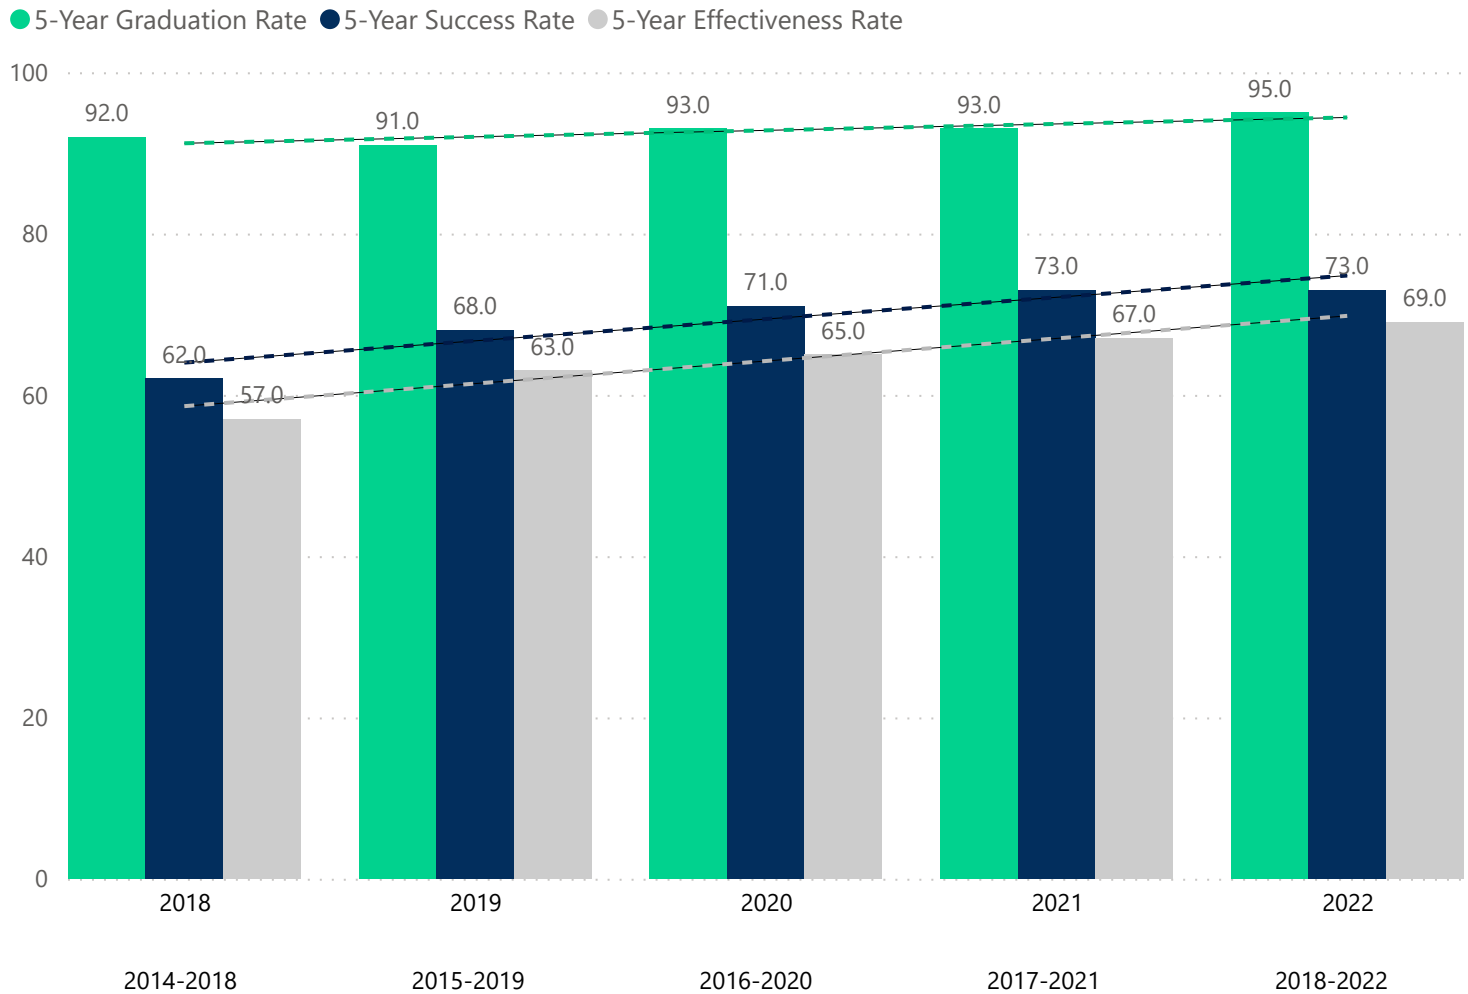

How do I know if my district is average, much better or much worse than similar districts?

**Estimate of your district's predicted effectiveness rate:**

### District Performance Level Category:

Far above average

## USD 237 Smith Center

NOTE: Postsecondary Effectiveness is measured 2 years after a student's high school graduation year. The most recent data available is for the class of 2020. This information for each graduating class is included in the bar graph provided by the state. In addition to this yearly value, the state also calculates a 5-year postsecondary effectiveness rate based on the most recent 5 years of data available. For example, the 2022 5-year effectiveness average would include data from the graduating classes of 2020, 2019, 2018, 2017 and 2016, whereas the 2021 5-year effectiveness average would include data from the graduating classes of 2019, 2018, 2017, 2016, and 2015.
